Diary Dates 2017

3 April	BASA Training Workshop: 'Effective Customer Communications'
13 June	BASA Sports Day, MacDonald Hill Valley Hotel & Spa & West Midlands Shooting Ground
14 June	Open Industry Forum, MacDonald Hill Valley Hotel & Spa
12 July	BASA Training Workshop: 'Leading Your Team Through Change'
13-15 September	FEICA 2017 European Adhesive & Sealant Conference and EXPO: Forte Village, Sardinia, Italy
October/ November	Autumn Open Technical Forum, Venue and date to be confirmed
25 November	Dinner Dance: Grosvenor Hotel, Chester
December Date and subject to be confirmed	SAA Seminar: Society of the Chemical Industry, 15 Belgrave Square, London

For dates of other events and working group meetings, please consult the website and the BASA Bulletin.

Welcome to the 2017 edition of the BASA Handbook. We aim to provide members with a wealth of practical information about the adhesives and sealants industry in the UK and Ireland.

With nearly 100 member companies, BASA is the business association for the adhesive and sealants industry in the UK and Ireland. You will find information about each member company, an overview of the work of the association, an authoritative and practical 'Where to Buy' directory for adhesives, sealants, raw materials and ancillary products, a guide to the industry's Trade Names, Technical Standards, and much more.

Further information about BASA, its members, how to select and where to buy adhesives and sealants, plus useful guidance documents and further valuable information, can be found on our website at www.basaonline.org.

Together, this handbook and website offer specifiers, users and members of the association virtually everything they need to know about the industry and its products.

Chairman's Foreword

Mark Louch
MD Mapei UK Ltd
BASA Chairman

Past Chairmen

Since the creation of BASA, there have been 17 Chairmen:

1983/1984	<i>George P. Hutson National Adhesives & Resins</i>
1985/1986	<i>Max M. Kochmann Pafra Ltd</i>
1987/1988	<i>Colin D. Hall Ralli Bondite</i>
1989/1990	<i>Harry G. Werrell Swift Adhesives</i>
1991/1992	<i>Paul M. Jones Industrial Adhesives</i>
1993/1994	<i>Neil C. MacDonald Evoke Ltd</i>
1995/1996	<i>Mike C. Ozier National Starch & Chemical Ltd</i>
1997/1998	<i>Malcolm C. Smith H. B. Fuller (UK) Ltd</i>
1999/2000	<i>Gerald E. Digby Bostik Findley Ltd</i>
2001/2002	<i>Paul C. Armitt Itac Ltd</i>
2003/2004	<i>Paul Dancer Nordson UV Ltd</i>
2004/2006	<i>Will Barclay Geocel Ltd</i>
2006/2007	<i>Guy Davis National Adhesives</i>
2007/2010	<i>Charles Hodgson Hodgson Sealants Ltd</i>
2010/2012	<i>James Igoe F Ball & Co Ltd</i>
2012-2015	<i>Guy Davis Beardow & Adams (Adhesives) Ltd</i>
2015/ Present	<i>Mark Louch Mapei (UK) Ltd</i>

BASA's voice must be heard

After the largely unexpected UK Referendum result last year and the corresponding chaotic Brexit reports and apparent lack of a coherent strategy, 2016 finished off with the US election result and further speculation on the possible effect on the economy that may result. It may not be clear what form the 'New World' will take (either as a result of the US election or Brexit), but it seems that uncertainty will prevail through 2017, as we wait to see what the results of the various European elections will be.

As a result, we have spent the latter part of 2016 trying to increase our contacts with other industry Associations and making sure that BASA's voice to government is as large as possible, given its limited resources. Council feel it is vital to continue to provide value for money by operating a low-cost Secretariat, but that means we need to work smartly and pool our positions with other like-minded Associations. This will continue on through 2017 and beyond.

I reported last year that the Adhesives and Sealants industry needed to keep a close eye on the circular economy debate. It is apparent there are many people who do not really understand why adhesives and sealants are used, why they're necessary and the positive contribution to sustainability. They are listening to comments made by the recycling industry who complain that they need better dismantlability and this seems to translate to: 'ban all adhesives and sealants and the problem will go away'. We are working with

FEICA on this, as this is not the real story and the value of the end materials, the overall design of any structure and having the ability to put higher technology recycling methods in place is the real answer. Even if you stopped using adhesives tomorrow, for the next 20 years what you are recycling would not be mechanically fixed and in 20 years' time many of the mechanical fixings would have failed or would be seized, so would not translate to easy recycling. We need to get smarter at getting these points over to the public in general and being able to put data to the stories will be essential. This brings me to the reminder that we are still looking for UK articles to contribute to the FEICA sustainability story and members should take a look at the FEICA extranet.

In addition to our technical programme, we continue to run our enthusiastically supported social events with the sports day in June and the Dinner Dance in November, and I hope to see many of you at these events, promoted through our new events website; and don't forget the 2018 AGM!

Enjoy this edition of the Handbook with its overview of our industry, along with news and details of technical and business events from the association, including some free ones. Finally, there is the business directory section with its trade names details that allow you to get in touch with members.

Mark Louch
BASA Chairman
Managing Director, Mapei UK Ltd
April 2017

THE MAX KOCHMANN AWARD WINNERS

This accolade, in memory of one of BASA's founders and former Life President Max Kochmann, is awarded for services to the association by a company or individual.

Year awarded	Name	Company
2005	Tony Bingham	National Starch & Chemical
2006	Roger Lester	BASF plc
2007	Bob Mabbutt	Bostik Ltd (Laybond Adhesives)
2008	Norman Purcell	Sealock Ltd
2009	Lorna Williams	Eastman UK (Synthomer)
2010	Paul Armitt	Itac Ltd
2011	Trevor Clarke	Pafra Adhesives Ltd
2012	Will Barclay	Geocel Ltd
2013	Line Willis	Henkel UK
2014	Desmond Waight	DanGoods Training & Consultancy Ltd
2015	John & Lynda Murdoch	JMA
2016	Neil Sanders	F Ball and Company Ltd
2017	James Igoe	F Ball and Company Ltd

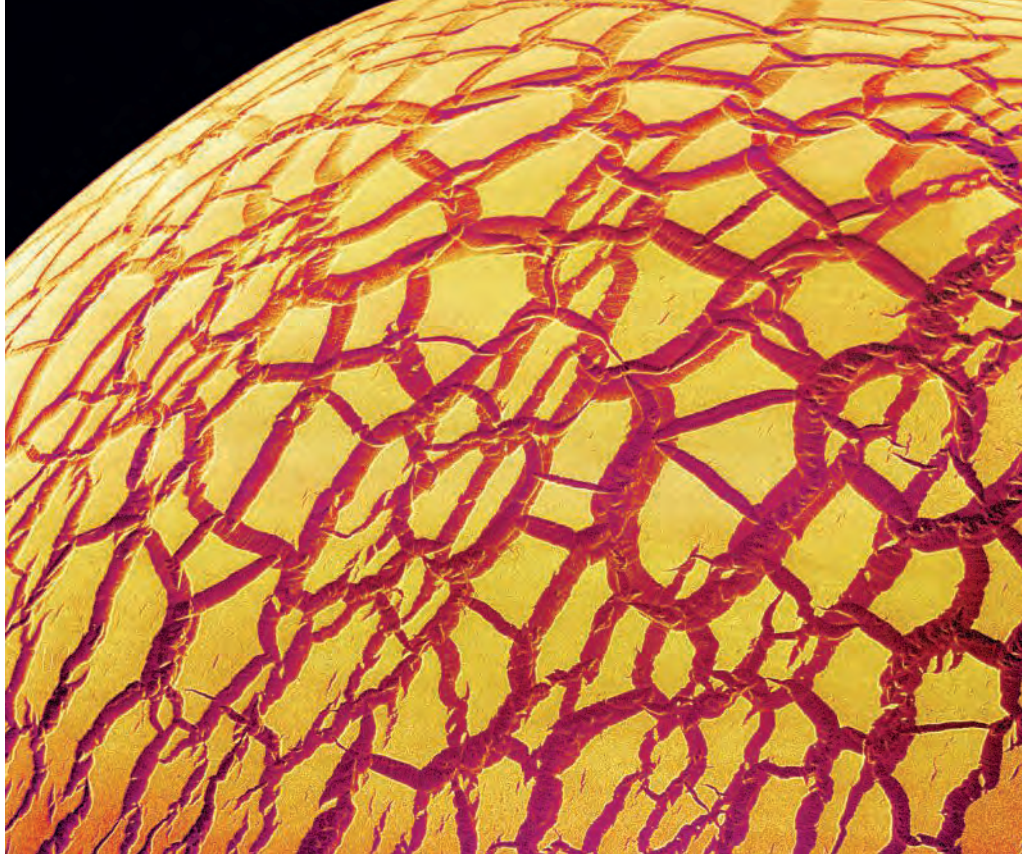

How Companies Can Join BASA

Membership is available for:

- Companies actively engaged in the formulation and manufacture or distribution of adhesives and/or sealants for sale in the United Kingdom and Ireland (Manufacturing Member)
- Companies supplying raw materials to the British adhesives and/or sealants industry (Raw Material Supplier Member)
- Companies supplying other services to the British adhesives and/or sealants industry (Service Supplier Member)

Visit www.basa.uk.com or telephone +44 (0)330 2233290 for Membership details

A Community Working Together

BASA

The important work of the technical community relies heavily on identifying committed representatives from the member companies. Getting involved in a Working Group is an excellent way for newer employees to gain experience and will help to keep BASA one of the leading trade associations. We would encourage all BASA member companies to consider nominating their staff in 2017. Think of it as a free training programme and a way to give newer staff members some exposure to the world of technical regulations. It can also assist them to understand the market, so it has wider benefits for us all. Without our technical working group members, BASA would have to increase its paid technical team and we all feel that this is not the best way forward for a healthy industry.

BASA was established largely as a technical association, offering information and advice on the importance of regulations and standards for the adhesives and sealants industry in the UK and Ireland. This remains the cornerstone of the Association, with an extremely active technical programme.

Once again during 2016, we have managed over 850 issues involving nearly 2000 documents. Of these, 30% were originally initiated by documents coming through FEICA and a further 25% directly from the European Commission. The remaining documents stemmed from BASA activities (22%), consultations with other trade associations (16%), UK government consultations and standards development. A total of 88 notices to the membership and further information posted to the website kept members informed, along with

regular articles and updates in the Bulletin, and presentations at the two Open Technical Forums.

BASA maintains five active working groups, all with their own programmes of work, keeping members updated about regulatory issues, and providing comment, evidence and information to governments and standards organisations.

BASA's programmes are built on the knowledge and expertise that reside within its five working groups, together with adhoc and standing task groups looking at specific issues. In recent years, our volunteer technical experts, ably assisted by the Secretary, Technical Officer and outside Consultants, have been moving away from simply keeping members abreast of new regulations towards offering an industry voice for modifying proposals for new and enhanced regulations directly to government and their advisors and, via FEICA, to the European Commission – much as we have been the voice for industry in standards committees in the UK, Europe and globally for many years.

The increased activity continues to add to the workload of our consultants as they work with each Chairman to ensure that the information is circulated widely to the membership via the website and that we have a broader input into consultations, encouraging new member input where possible.

Shortly after this Handbook is published, you will be enjoying the benefits of a brand new state-of-the art Website, which is designed to dramatically improve member communication and engagement, and our new events website is already proving popular to book our flagship events.

Big opportunities in the Unknown

Introduction by BASA Secretary, Lorna Williams

With the decision of the UK electorate in the 2016 referendum to withdraw from the EU, we find ourselves in very uncertain times, a situation that no business wants to see continue. Now that Article 50 has been triggered and the negotiations to extract ourselves as painlessly as possible are officially in play, we will start to see what the post-EU membership landscape will look like.

One thing that I think we can all predict is that the increasing burden of EU chemicals regulation will continue to impact all of our businesses, whatever our export situation, and regulations like REACH and the Biocidal Products Regulation (BPR) will continue to be challenging.

During 2016, I attended a number of meetings on behalf of BASA, relating to Brexit. I think it's safe to say the only certainty is that no one can really predict what the post-Brexit world will look like, at least for the foreseeable future.

I know that BASA has members who cover a wide range of business types and sizes, and so, moving forward, BASA will offering members as much information as possible, both in terms of impact

of regulations and also issues like CEN and ISO standardisation, and the impact of Brexit on these processes.

One investment that Council proposed and members agreed to at the 2016 AGM was the development of a new website. We started work on this in September 2016 and the project will be complete during the first half of 2017. I would therefore urge every one of you to start using the new website (and that means making sure you register!), and feed in comments and information to the appropriate working groups. BASA is stronger because of membership involvement. We stay on top of the technical issues because we have an active membership. We have access to more information than if we stand alone because of our membership of FEICA, the Alliance of Chemical Associations (ACA), the Trade Association Forum (TAF), Croner and the Construction Products Associations (CPA). These are big resource stores that are available for all our members, so please use the new BASA website to access information.

The various networking events we hold through the year are also a vital member resource, so I would strongly advise you to look at the programme and attend some of the events. As the tag

The REACH 2018 registration deadline

With the pre-registration deadline of May 2017 speedily approaching, eyes are now turning to the 2018 registration race against the clock. ECHA's forecast on the number of new registrations, 70,000, and the registrants' profile, predominantly Small and Medium Enterprises (SMEs), for May 2018, prognosticates something of a quake in the structure of the chemicals market.

In order to avoid unexpected surprises and inadvertently incur expensive mistakes, it is of crucial importance for companies, independently of their role in the supply chain, not only to determine their obligations under REACH, but also to communicate regularly with their suppliers/customers regarding their intentions for the 2018 deadline.

Who is affected by the deadline?

31 May 2018 is the REACH Registration deadline for 'phase-in' substances that are manufactured or imported, on their own or as part of mixtures or articles, into the European Economic Area (EEA) in volumes between 1 and 100 tonnes per year. A substance cannot be placed in the market unless a registration has been submitted to ECHA. However, companies that submitted a pre-registration benefit from transitional arrangements that allows them entering the market before the registration process is complete. Additionally, if a company wants to commercialise a new substance, the substance needs to be fully registered before it is placed in the market, since 'non phase-in' substances do not benefit from transitional arrangements.

Most companies required to register by May 2018 are SMEs, for which REACH registration might impose a considerable economic burden. This is especially the case of niche chemicals manufacturers, who may find that little or no data is available for their substances, therefore facing a significant cost increase because of testing requirements. The result is that some companies might register only their most profitable substances, or reduce the imported/manufactured volume below 10 tonnes per year, in order to benefit from less comprehensive registration requirements. In those cases where the supplier decides not register the substance, they might opt for either the total cease of manufacture or import, or for capping the tonnage below 1 tonne per year, with the aim of avoiding registration while remaining on the market. In any case, a reduction in raw material suppliers and a lower number of substances commercially available are expected as a consequence of the REACH 2018 deadline.

Continues on page 11 ►

line on our posters goes, 'better together' – and this means that, as a relatively small industry sector, the work of the adhesives and sealants industry is vital to the economy, and we need to work together to make sure our voice is heard.

We have not only the Brexit challenges ahead, but also some potentially industry-damaging chemicals legislation on the horizon: di-isocyanates threaten the polyurethane industry, BPA's listing as a potential SVHC threatens the epoxy industry, cyclotetrasiloxane (D4) and cyclopentasiloxane (D5) considerations under REACH Annex XVII threatens the silicone industry and the MIT reclassification threatens the preservation and shelf life of all water-based systems. This trend to look at 'banning' chemicals without looking at a bigger picture has severe implications for the adhesives & sealants world, and BASA and its working groups will be working hard to advise members and advocate wherever possible for chemicals and chemistry that is essential to our industry.

The Technical Review follows (see page 10) where BASA's TSC Chairman and Technical Officer Jim Palmer goes into more detail on some of these all-important subjects.

Technical Review: the devil is in the detail

Jim Palmer, TSC Chairman and BASA's Technical Officer

Without the dedicated and diverse support of our Working Group Chairs and all the active Working Group participants and their sponsoring employers, none of the achievements in 2016 would have been possible.

The BASA technical programmes provide a major added value contribution to our industry and it is vital that all of our members take advantage of it to get the most out of your annual subscriptions. In the past, our technical programmes were focused on input to product standards development through BSI and then CEN and ISO, and representing our industry on the various technical committees is still a considerable part of the work. Our BASA Secretary Lorna Williams has taken on an increased involvement in the CEN and ISO work as part of her own Consultancy work to the industry, supported by myself and other BASA Chairs and Working Group participants, particularly on the Building Adhesives & Construction WG and Sealants WG. However, in recent years we have become increasingly involved with guiding and steering the development of legislation and political policy by adding our voice to others, both in the UK and in Europe. So, if we are to accurately represent the industry and ensure the best possible outcomes in minimising cost and maximising competitiveness, we need increasing and consistent input from the members.

For most of the working groups, the ever-changing regulatory landscape consumes much of their resources. Further information is, as always, available on the BASA website under the Working Groups, but I will highlight some of the issues in the last 12 months.

For the Health & Safety Working Group, the implementation of the full provisions of the Classification, Packaging and Labelling Regulation (European Regulation (EC) No 1272/2008), known as the CLP regulation across Europe on the 1 June 2015, continues to require our input. For example, we have helped develop a product categorisation system that will be essential for the cataloguing, and hence easy retrieval when needed, of information supplied to the national poison centres around Europe.

The continuing REACH process also has major effects on our industry. We are less than eighteen months away from the May 2018 deadline for the registration of the largest number of substances in the 1 to 100 tonnes category, which will inevitably create issues as substances become no longer available. In addition, the process grinds on for some key substances such as isocyanates, titanium dioxide and biocides as they are evaluated for their impacts on human health and the environment, and the control measures possible and desirable. The long debate about bis phenol A (BPA), a component of epoxy and polycarbonate chemistry, has finally resulted in the substance being added to the candidate list of substances of very high concern, due to its reprotoxic properties. This despite the European Food Standards Agency opinion that the chemical posed no health risk to consumers of any age, including unborn children, since any exposure to it is considerably under the safe daily intake level.

The Environment & Sustainability Working Group has updated its name and remits to include sustainability as a key topic. Led by

BASA consultant Tony Bingham, we have developed an ethos for sustainability supporting the vision: “The adhesive and sealant industry is committed to enabling a growing population to live a better life and to use the planet’s resources more responsibly and efficiently.” We are also currently investigating the establishment of a packaging recycling scheme to support members’ circular economy efforts.

The Packaging Adhesives Working Group continues to focus on concerns regarding food contact materials, an area where new concerns are identified on a regular basis. In particular, this is likely to include non-intentionally added substances (NIAS), migration, risk assessments, activities of the EU Commission and Parliament, and some substance-specific issues, such as mineral oils.

CE marking and the development of harmonised standards has again been the focus of the Sealants Working Group (and also the Building Adhesives Working Group, see below). However, some potentially damaging regulations around titanium dioxide, oximes and isocyanates, as well as the Biocidal Products Regulation, have required the group to organise attempts to mitigate the effects of any new regulation.

BASA continues to benefit from its membership of the Construction Products Association (CPA). Members are individually eligible to subscribe to a weekly email update issued by them covering the economy, news from the UK Parliament, the associations activities and events, and others issues of interest. They also hold regular briefings for the activities of their technical committee and sustainability policy group.

One of the key topics surrounds indoor air quality and its eventual introduction as part of CE marking. We are very close to the approval of a European ‘class’ system for VOC, SVOC and LCI values, rather than the possibility of lists of values being linked to the Declaration of Performance, which would be very complicated and confusing. This European system will replace the numerous national schemes currently operating.

Finally, I could not finish this report without also mentioning the referendum vote to leave the EU. What ‘Brexit’ eventually means and looks like is difficult to imagine. The complexity of unpicking legislation like REACH, to name just one regulation, is almost too much to comprehend. Should we develop a UK REACH with our own equivalents of ECHA, Risk Assessment Committee, Committee for socio-economic analysis, and board of appeal? Should this UK REACH include a mutual recognition with the European Regulation or should it attempt to stand alone, in which case what level of acceptance will that have around the world, let alone Europe? I’m just glad I am not a politician or civil servant. This is going to take an awfully long time to sort out!

► Continued from page 9

May 2018 is closer than we think

Considering that the preparation of a registration dossier takes between 11 and 34 months, depending on information requirements, companies should have assessed their portfolio, determined which substances they wished to register and started the preparation of the dossier by now. The laboratory testing work alone takes typically around nine months for substances manufactured/imported below 10 tonnes per year (Annex VII), and 11 months for substances above the 10 tonnes threshold (Annex VIII). As testing needs to be completed several months before the deadline to ensure that sufficient time is left for the Risk Assessment and Chemical Safety Report, the starting date for testing should be around May 2017 for Annex VII requirements and March 2017 for Annex VIII. Additionally, due to the capacity limit of laboratories, a four-month backlog is common, meaning that initial arrangements should have been made with a testing laboratory by early 2017.

Potential supply vulnerability

Those companies who use a substance, either on its own or in a mixture, in the course of their industrial or professional activities, are defined as Downstream Users (DU) within REACH. DUs usually manufacture goods where chemicals are not the main element of their business, such as cleaning products or paints. Although DUs generally do not have registration obligations, the 2018 deadline might affect them as well, since they could suffer significant supply disruption as a result of substances being withdrawn from the market.

DUs are advised to maintain regular communication with suppliers, in order to check the registration status of substances critical for their business, and that their uses are included in the registration. The registration status of a substance, together with the list of registrants for that particular substance, can be consulted in ECHA’s website. This will provide DUs with a list of potential alternative suppliers. Additionally, if no supplier intends to register a critical substance, DUs could become importers, assuming the registration obligations themselves.

Responsibilities beyond the 2018 deadline

There are other important aspects of REACH beyond registration, such as Evaluation, Restriction and Authorisation. Additionally, as part of the approach to managing chemicals of concern at EU level, the Candidate List of Substances of Very High Concern (SVHCs) will continue to grow, encouraging professional users of chemistry to find suitable alternatives. It is important for DUs to make sure that they have the necessary regulatory expertise and that chemical management systems are implemented at their site, so as to monitor and deal with the continuous regulatory updates, while minimising business disruption.

At REACHReady, we guide companies from all levels at the supply chain through the various regulatory processes within REACH, CLP and BPR, offering a wide range of quality services from consultancy through training courses. Contact us at enquiries@reachready.co.uk to find out how we can help you.

Marina Fuentes, Technical Advisor at REACHReady
Dr. Marina Fuentes joined REACHReady as a Technical Advisor in October 2016, after obtaining a PhD in Chemistry from the University of Nottingham. As part of her main responsibilities, Marina coordinates the Matchmaker programme, edits the REACHReady technical alert, and provides regulatory advice at the helpdesk.

Poison Centres – An Overview

Larissa Silver, National Chemical Emergency Centre

Article 45 of CLP directs Member States to appoint a body that is able to receive information on mixtures considered hazardous on the basis of health or physical effects, primarily to use in case of medical emergencies. However, without additional clarification countries have implemented this legislation in a variety of ways. The level of information required by a poison centre on a product's hazards, the registration process, the products that need to be registered and the cost of compliance varies widely between Member States.

When CLP was introduced in 2008, article 45 had a clause built in for a mandatory review period. After a lengthy consultation with the EAPCCT (The European Association of Poisons Centres and Clinical Toxicologists), industry, poison centres and Member States themselves, the European Commission came to following conclusions; that the implementation of article 45 of CLP was so varied that it led to inconsistencies in the advice provided and incurred unnecessary costs on industry.

This has led to the highly anticipated Annex VIII to CLP that has been introduced to harmonise a significant amount of the implementation of article 45 of CLP. In this article we will cover some of the key changes that are due to affect the chemical industry across Europe from 2020.

Annex VIII

This Annex primarily addresses the information that must be included in a notification and the format that it is delivered in. These information requirements aim to be middle ground between the least and most restrictive Member States.

Currently, the information required in submission varies from as simple as the submission of a safety data sheet (SDS), to the exact and full composition of your hazardous and non-hazardous ingredients. To address this Annex VIII has introduced a minimum level of information that must be included in a notification. This includes information that would be present on a high quality SDS such as the colour, physical state, the pH where applicable, hazard classification and toxicological information from section 11.

Information on the non-hazardous components of a mixture will be required for all notifications of consumer and professional mixtures. The vast majority of Member States required this information in some form, but the Annex introduces concentration ranges and a minimum declaration level of 1% to strike a balance between protecting company's intellectual property and securing consumer health.

These non-hazardous components can be submitted under a generic product identifier if they are added to the mixture solely as a perfume, fragrance or colouring agent. These generic product identifiers are limited to 5% for perfumes and fragrances, and 25% for colouring agents. To be eligible they cannot be classified for any health hazard except for skin sensitisation cat. 1, 1A or 1B or aspiration toxicity in the case of perfumes and fragrances. A full list of the constituents used under this product identifier must be provided to poison centres as a separate document but they do have to be affiliated to any particular product.

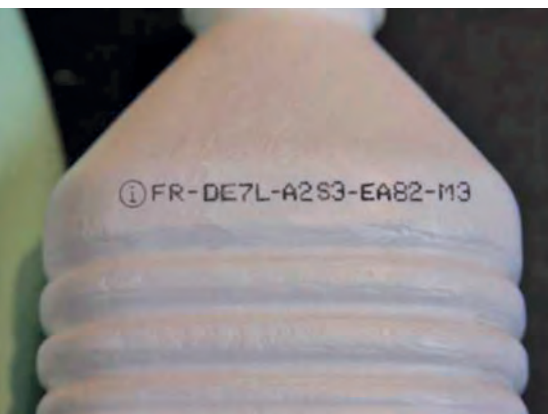

The declaration of hazardous ingredients has been split into two categories; with those deemed a major concern for emergency health response such as those with a toxicity or corrosive classification, being treated separately to all other hazard classifications. Any ingredient that makes up 0.1% of the formulation and has a health or physical health classification must be declared within pre-supplied concentration ranges. How prescriptive these concentration ranges are depend on whether the component is deemed a major concern for emergency health response, falls under one of the other categories or is non-hazardous.

Changes required to packaging information

A Unique Formula Identifier (UFI) will be required on all product labelling to make product identification quicker and easier once it is registered with the poison centre. This is an alpha-numeric code that is unique to each product, and is generated using the companies VAT number and a new internal reference code for that product. The tool to generate the UFI is maintained by the Commission, but the generation and allocation of this tool is the responsibility of industry. These UFIs are not Member State specific, but rather per product, and it is an integral part of every notification.

Harmonised submission format

The Annex confirms that from 2020 there will only be one submission format available to industry and poison centre alike. Current formats vary from forms, to xml sheets and bespoke Member State

software and notification portals. The Commission have decided on an XML format that has been developed and provided by ECHA. This can either be imported into your own data management system, ideal if you have many thousands of products, or you can manually enter this information into the commission's PC editor tool. This information would need to be provided to each Member State in turn, although a feasibility study will take place into the possibility of a one-stop notification portal to all Member States.

Reduced submission for industrial products

The consultation conducted by the Commission found that calls relating to industrial products are a small percentage of those received by poison centres. As such, a limited information requirement will be provided for submission of industrial products to a poison centre. This is defined as products that are intended to be used solely on an industrial site however, further clarification has been requested from ECHA on what products fall under this definition. This simply required the submission of an SDS supplemented with a 24 hour telephone number and email where further information on the composition can be provided in the language of that Member State. This has the potential to greatly reduce the volume and cost of submissions a business may need to undertake. However, organisations will need to ensure their systems are robust enough to deliver round the clock expert advice when required.

Notification timeline

These new requirements are being implemented step wise to reduce the effects on industry and will be implemented depending on the intended use of the mixture. These new amendments are applicable to importers and downstream users from:

- 2020 for consumer mixtures (destined for use by consumers)
- 2021 for professional mixtures (destined for professional users but not used at industrial sites)
- 2024 for industrial mixtures (destined for use solely on industrial sites)

Any submissions provided before these amendments come into force will remain valid until the 1st January 2025 unless there has been a significant change in formulation, product identifier or classification of the mixture.

Use of poison centre numbers in Section 1.4 of safety data sheets

Under REACH Annex II if an EU Member State has appointed a poison centre an Official Advisory Body (OAB), as most have, then their telephone number must be included in Section 1.4 of the SDS. This number can only provide information on health response and so can be used in addition to other emergency response numbers that can provide advice on fires, reaction, spillages and transport related queries.

Inclusion of the OAB number in the SDS can only be done once the appointed receiving body has been notified of the required product details and safety information. We have seen an increase in enforcement by the competent authorities in relation to the use of these OAB numbers in section 1.4

Looking forward

Each mixture that is classified for its health or physical effect will be allocated a product code that must be included in all notifications. This has yet to be defined by the Commission, but will be similar to the existing REACH or biocidal product codes.

Whilst this Annex comes into force on the 1st of January 2020, Member States will begin to accept information in line with

this annex prior to the enforcement date to reduce the burden on themselves and industry. Companies should be prepared to submit under these new requirements a year or so before the 2020 enforcement date. ECHA is planning to release guidance in 2019 to address some of the inconsistencies and queries that have yet to be addressed by this annex.

Businesses should be looking forward and beginning the process of generating and allocating UFI's to their products labels and determining if they need to make these UFI's unique to particular markets. Additionally, organisations should be evaluating their product portfolio and the markets they move in to determine if they would benefit from notifying now, and resubmitting in 2025.

It is important to note, however, that notification of mixtures and biocides to these poison centres is a legal requirement now in all Member States, with the exception of the UK, and there are fines and sanctions for non-compliance.

This annex to CLP will dramatically change the requirements for submissions to Member State poison centres; potentially to accelerating submissions while reducing the cost of poison centre compliance. However, harmonisation may also increase the enforcement of the legislation, and present a higher risk of fines or product removal for non-compliant companies. As always, a comprehensive understanding of how best to meet corporate responsibility will be key to maintaining business continuity and securing commercial success.

NCEC offer a Poison Centre Notification Service, where they can register your hazardous products in each of the EU Member States in which you place on the market, enabling you to use the appropriate OAB number on your SDSs and comply with Annex II of REACH.

If you would like further information on the NCEC Poison Centre Notification service or their complementary poison centre information sources, please visit <http://the-ncec.com/poison-centre-notification>

Your talent acquisition and development partner

Chemical Search International is proud to support BASA with recruitment, training and funding services

Chemical Search International specialises in the chemicals sector, with first-hand experience of the polymers, adhesives and sealants industries. We offer a full suite of cost-effective recruitment services, including the ability to advertise vacancies where you can reach our network of over 40,000 chemical industry professionals.

For middle and senior level positions, we can carry out a full Search or Headhunting service, which can be confidential, as required. Candidates are identified, interviewed and a full profile is presented for you to select those that you wish to take to further interviews. As the recovery continues to gain momentum and the industrial pipeline fills, then people feel more comfortable and less anxious about job security.

They may even start to think about moving job – so there is a real risk that you could lose your best talent.

Now is the time to look again at your resourcing and talent strategy. You need to be planning on how to build your resource and to address the talent gap left by downsizing or recruitment cutbacks that were so necessary to weather the economic storm.

Staff Development

If you do not want to increase headcount just yet – how about

developing existing staff? This will help you to hold onto them, but also increase the effectiveness of your business – getting ‘more from less’. So, if want to keep developing your staff to make your business more competitive, we offer a range of services, from one-to-one coaching through to team workshops.

We have successfully run two workshops for BASA members on Building Effective Working Relationships, with excellent feedback, and have further one-day workshops planned in April and July this year on Effective Customer Communication, and Leading Your Team Through Change.

We also have our flagship and well established leadership and management coaching program – Perfect Direction. This has proven to be a highly effective intervention for those wishing to develop their management skills; maybe because they are making a job transition to the next level. This is one-to-one coaching carried out at your place of work.

Other Services

We are continually looking at additional professional services we can offer for the benefit of BASA members. One such service is on R&D Tax Credits, an excellent form of funding where you can offset your R&D costs against your company tax. We have teamed up with RandDTax who are highly respected specialists in this area. We carry out a no-cost scoping meeting where we can assess what your benefit would be under this HMRC scheme.

More services are planned for 2017, including an exciting and unique on-line networking portal for chemical executives.

For more information on any of these services, contact Dr David Barkel at: djb@chemicalsearch.co.uk, telephone 07722 144 664 or visit: www.chemicalsearch.co.uk.

“ **Success is no accident. It is hard work, perseverance, learning, studying, sacrifice and, most of all, love of what you are doing or learning to do** ”

Pele

FEICA European Adhesive & Sealant Conference and EXPO 2017

13-15 September 2017

Forte Village, Sardinia

Driving Innovation

Year-on-year, FEICA attracts a record number of industry leaders to discuss market drivers and trends, innovation, sustainability and technological advancements.

The FEICA Conference and EXPO is firmly established as the premier event for Europe's adhesive and sealant industry, providing essential insights into the key issues affecting the industry and great networking opportunities for formulators, raw materials suppliers and customers.

The adhesive and sealant industry's essential event

13, 14 & 15 September 2017

- **Network** with other professionals in the adhesive and sealant value chain.
- **Understand market dynamics**, market trends and emerging economic developments that could impact your business.
- **Tap into your end-users' needs** and learn what downstream users expect from you.
- **Expand your knowledge** of the advances in key technologies and applications from research and development professionals at the cutting edge of innovation.
- **Take the pulse of the most relevant industry trends**, covering the full range of adhesive and sealant technologies, applications and markets.
- **Learn about raw material supply chain trends** and what your equipment suppliers have in store for you.
- **Get informed** about regulatory changes that are coming your way and their impact on your business.

EXPO

13, 14 & 15 September 2017

The Table Top Exhibition opens on Wednesday 13 September at 15:00 and runs until Friday 15 September at 14:30.

The European Adhesives and Sealants Market 2016

By Monique von Dungen, Managing Partner, CHEM Research GmbH, Frankfurt, Germany, info@chem-research.com

Europe

The European market for adhesives and sealants accounts for about 30% of the world demand. In 2016, the size of the European market reached 4.4 million tons, representing a value of € 14 bn.

Since 2015, the EU and Eastern Europe have shown different patterns of growth as a result of geopolitical changes. While the adhesive and sealant demand continued to grow at a sustained rate of 2-3% annually in the EU, the demand in Eastern Europe was affected in a negative way by the economic developments in Russia and Turkey.

In 2016, many EU countries experienced a strengthening of the internal demand, supported by increased consumer spending. Main drivers behind the European adhesive and sealant demand growth are the healthy state of the transportation sector, the automotive industry in particular, and building activities picking up in many countries.

Germany maintains a leading position in the European adhesives and sealants market (Figure 1) with a 19% share in 2016, followed by Great Britain (11%), then France (10%), Russia, Italy and Turkey (9%, 9% and 8% respectively). Thus, these six countries account for about two thirds of the European market for adhesives and sealants.

The European market increased 2,5% in terms of demand volume in 2016 (see Figure 2). Most countries experienced positive growth. While Great Britain and Germany enjoyed above average growth, Italy and France are still experiencing weak demand. Turkey's rapid market expansion in recent years has slowed down and the Russian market is showing signs of recovery after severe declines in 2015.

Great Britain

The British adhesives and sealants market continued to progress well on its solid growth path, reaching a demand volume of 470 thousand tonnes and a value of nearly € 1,7 bn (manufacturers' sales value) in the year 2016.

The growth factors characterising the European adhesives and sealants market are found to be particularly strong in the British market, with a buoyant automotive industry in 2016, and a growing number of housebuilding and civil engineering projects. Furniture manufacture also experienced a boost.

The devaluation of the pound sterling had a positive effect on exports, which sustained higher industrial production levels in the second half of 2016. This

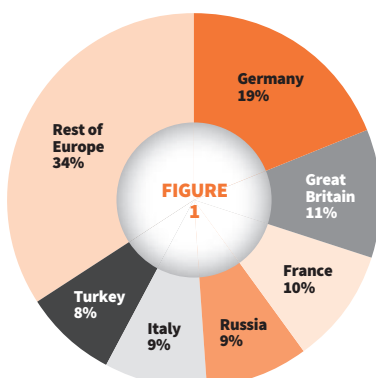

trend is expected to continue in 2017. The downside of the currency devaluation is the rising costs of imports, which is likely to impact consumer spending and domestic demand in the future.

Figure 3 shows a split of the British market in market sectors, as defined by the Adhesives and Sealants Classification Manual. This market classification was established by leading industry associations such as FEICA (Association of the European Adhesive and Sealant Industry in Brussels), the ASC (Adhesive and Sealant Council in the U.S.) and CATIA (China Adhesive and Tape Industry Association).

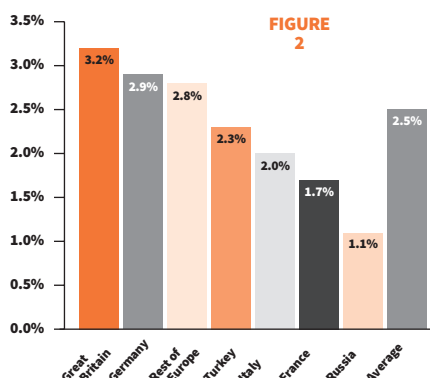

For 2017, the market projections indicate that the British adhesives and sealants market will continue growing. However, the rate of growth may be lower than in 2016. Growth will be supported mainly by the construction sector and Great Britain's success in export markets.

This article is a preview of the forthcoming issue of the FEICA market report, 'The European Adhesives and Sealants Market 2016-2019'. This report update will be available from FEICA in late 2017. (<http://www.feica.eu/information-center/market-reports.aspx>)

Circular Economy

How the Circular Economy discussions might shape our future – but will this be positively or negatively?

We have all been innovating over the last 15 years to produce green adhesives and sealants, and comply with the various environmental regulative initiatives, as well as cope with raw material shortages and price fluctuation. Yet of late the term ‘circular economy’ is increasingly being promoted. It is no longer about carbon footprint or dangerous chemicals (still, don’t be mislead, as changes in these areas continue to be challenging), but the world is ever more focused on the circular economy.

Our membership of the Construction Products Association has alerted us to comments made about manufacturers hiding behind generic EPDs (not to be confused with Model EPDs) and the recycling targets being made more difficult because of adhesives and sealants (which apparently stick too well and don’t allow dismantleability). These are just two of the issues that we have heard during meetings.

There is a global drive to look at not just recycling, but the total picture and to try to keep the value of the resources intact as much as possible. This means an increasing desire to re-use, rather than recycle, and perhaps a competition between durability and dismantleability; we must be careful to ensure that regulatory changes are not made in ignorance of this.

Comments such as: ‘If we ban adhesives and use tapes, because these are easier to remove when we dismantle’ are the sort we must take seriously. We have to get involved in these discussions right at the beginning. It is about designing for end of life, and making sure that adhesives and sealants are not treated unfairly simply because of a lack of understanding. We must work with the recycling industry to ensure that we are able to continue to provide the function that you get from an adhesive, compared to a mechanical fixing (or a sealant). We must dispel the myth that mechanical fixings are

easier for recyclers. Those of you who have ever dealt with seized nuts/bolts will understand that the notion, ‘We can simply unscrew it’, can sometimes be anything but the case, but instead time consuming, thus ‘extracting’ all of the residual value!

We do this not because of commercial reasons (although our Chemical Industries Industry represents about 2% of the total European turnover, a not insignificant figure) and contributes more than €13 billion to the EU and employs more than 41,000 people, but because of the long-term benefits that the use of liquid adhesives and sealants brings. Insulation, speed of construction, durability, light weighting, sound proofing, vibration damping, better aesthetics and the ability to bond a wide variety of substrates are functions that should not be forgotten.

After a recent scare regarding Commission Intentions to regulate fixing solutions on electronics by focusing on one solution only, after a concerted effort by FEICA and others they have managed to get concessions to leave the solution open. The commitment of the Commission for recycle and reuse is, however, clear, so somehow with limited resources we must remain vigilant.

BASA members are encouraged to follow these discussions on the website, but more importantly to raise any questions or share any negative comments with BASA when they hear them. Our ability to inform the membership relies on the members talking to us, as well as us briefing everyone. Unlike some larger Associations with staff, BASA tries to provide our information for the lightest possible costs, in order to be sustainable long term!

Aroset™, Blanose™, Culminal™, Klucl™, Natrosol™,
 Pliogrip™, PureRad™, PureLam™, PureSeal™,
 PureKote™, Purethane™, PVP/VA copolymers, V-
 Cap™, V-Pyrol™

Company Profile:

Ashland is a leading producer of high performance pressure sensitive adhesives and structural

adhesives serving the industrial, converting, transportation, medical and construction industries. Aroset adhesives are solvent based acrylic pressure sensitive adhesives with outstanding clarity, tack peel strength and resistance to UV, oxidation and heat resistance over a wide temperature range. These adhesives are manufactured in the United Kingdom as well as the US and are typically used in applications such as labels, decals, transfer films, mounting foam tapes, vinyl graphics, medical and removable. Pliogrip adhesives are two-part polyurethane adhesives and are used for bonding thermosetting composites, including SMC, RTM, FRP, SRIM, pultrusions, carbon fibre composites and many others. They are specified wherever critical performance is required and OEM approved. In addition to transportation applications, Pliogrip adhesive technology has

been specified for aerospace, infrastructure, industrial, and aftermarket repair applications. These products have been specified for bonding composite body panel assemblies, specialty components, under-the-hood and vehicle framing applications. There is a Technical Support Laboratory based in the UK, which allows a quick response to customers needs for custom designed adhesives and coater ready products by not only being able to make compounding modifications but also being able to make changes to the polymer during the manufacturing process. The ongoing research at Ashland allows the development of new marketable technologies which address customer needs. Ashland's manufacturing sites are ISO registered and remain committed to safety, quality and to world-class manufacturing, customer service and technical.

Principal Trade Names:

Acronal®, acResin®, Acrodur®, Styrofan®, Butofan; Lupher®, Epotal®, Joncryl® and Additives: Rheovis®, Displex®, Hydopalat®, Foamaster® and Foamstar®

Company Profile:

At BASF, we create chemistry – and have been doing so for 150 years. Our portfolio ranges from chemicals, plastics, performance products and crop protection products to oil and gas. As the world's leading chemical company, we combine economic success with environmental protection and social responsibility. Through science and innovation, we enable our customers in nearly every industry to meet the current and future needs of society. Our products and solutions contribute to conserving resources, ensuring nutrition and improving quality

of life. We have summed up this contribution in our corporate purpose: We create chemistry for a sustainable future. BASF had sales of over €74 billion in 2014 and around 113,000 employees as of the end of the year. BASF shares are traded on the stock exchanges in Frankfurt (BAS), London (BFA) and Zurich (AN). Further information on BASF is available on the Internet at www.basf.com. BASF maintains business relationships with customers in more than 170 countries and supplies approximately 8,000 products from its five segments to a wide range of industries worldwide. BASF's strength is not only that it has an extremely broad product range, but also that it supplies an extraordinary number of different industries. This balance makes the company relatively resilient to factors affecting individual industries. Worldwide, about 7,500 BASF employees work in research and development. About three quarters of BASF researchers work in Ludwigshafen, the world's largest centre of know-how for chemistry and technology. Responsibilities towards the environment and towards society are key elements of BASF's corporate philosophy. By subscribing to the "Responsible Care" initiative launched by the chemical industry, BASF has committed itself to steadfastly pursuing improvements in the realms of environmental protection, health and safety. In the area of Pressure Sensitive Adhesives, our Acronal and acResin products make solutions possible in

challenging adhesive applications. They are used for highly demanding labels, tapes, films and other special adhesive applications. In the field of Industrial Adhesives we offer Adhesive Raw Materials for the following fields of application: - packaging adhesives, especially for peel & seal envelope closures and labelling of plastic bottles - lamination adhesives, especially for glossy film overprint lamination and film/film composites - lamination adhesives for the interior car trim, furniture foil and shoe industry In addition we have some special products to improve the adhesion of packaging adhesives on difficult surfaces. Our Construction product range is versatile. The main applications are - Ceramic tile adhesives - Flooring adhesives - Sealants - Flexible roof coating - Water proofing membranes - Primers - Mortar modification and concrete repair systems - Concrete plasticizers.

Accreditations:

BS EN ISO 9001:2008, ISO 14001:2004 and BRC certified

Company Profile:

Beardow Adams is the UK's largest manufacturer of hot melt adhesives and one of Europe's top five such companies.

Its products are used worldwide for packaging, labelling, product assembly, bookbinding, woodworking, pressure sensitive coatings (for example, tapes and labels) and other coating and laminating applications.

To date, the company has won five Queen's Awards – four for International Trade and, in 2002 for Innovation for its BAMFutura hot melt, a thermally stable, odour free product that is approved for direct food contact.

With a manufacturing capacity of 50,000 tonnes/year, Beardow Adams has the single largest hot melt plant in Europe, its size representing an estimated 4% of world hot melt production.

Significant R&D expenditure has continued to enhance Beardow Adams' reputation for innovation in hot melt technology, especially in the areas of pressure sensitives, packaging and versatile assembly adhesives for bonding dissimilar materials. A global network of subsidiaries and partners serve in over 75 countries worldwide.

Fosroc is an international leader in construction
chemicals supplying many projects across a broad
range of sectors including commercial, industrial,
residential, marine and infrastructure. The product
range includes sealants, waterproofing products,
grouts, repair mortars, flooring products, coatings
and concrete admixtures.

All Fosroc products meet international
specifications and have been used on some of the
largest and most prestigious projects in the UK and
overseas. Our sealants utilise all major polymer
technologies, including polysulphide, modified,
silane, polyurethane, epoxy and hot applied
materials, making them suitable for most building
and civil engineering needs.

Fosroc sealants range from chemical resistant to
intumescent and are used in a wide variety of
applications, including sewage treatment works,
highways, factory floors, stadia and building

facades.

Supported by an experienced technical helpline
and first-class customer service, Fosroc is able to
work with customers to provide a complete
solution, whatever the project.

Company Profile:

FSi manufacture and develop a complete range of compartmentation systems suitable for applications all over the world. Alongside this we have a comprehensive range of test data backing up these innovative products. These systems are primarily used to prevent or slow down the passage of elements, such as fire, air, sound, movement and water. With personal safety being so important, our systems are

designed to protect the buildings occupants whilst minimizing loss. We pride ourselves on the high level of testing and technical expertise that has been built up through years of experience within the industry, from site hand to dealing with large Multi-National conglomerates. This allows us to supply product both in the UK (BS Regulation) throughout Europe (EN Regulation) and Worldwide (EN and UL Regulation). Alongside this all of our main products are 3rd party certified. We also offer a complete range of systems which are CE Marked, showing that our quality can be measured. We are here to help and make sure the correct solution is specified correctly the first time to ensure budgets, timescales and required specifications are kept to.

Company Profile:
IMCD UK Ltd is a leading Speciality Chemical

Distribution Company and is part of the IMCD
Group. IMCD UK have a strong technical focus and
work in partnership with many of the market
leading raw material suppliers across many
different market sectors. With an ever increasing
portfolio of products, IMCD UK has become one of
the leading distributors for specialities to the
Adhesive Industry. We have a strong product
portfolio for the adhesives and sealants markets
including: Aditya Birla carbon blacks; Akzo Nobel
surfactants; Ashland cellulose (CMC, HEC, HPMC,
etc); BASF acrylic monomers; Chemtura
polyurethane systems; Deosen xanthan gums; Dow
biocides & laminating adhesives; DSM acrylic,
polyurethanes, polyesters & various crosslinkers;
Eastman tackifiers, coalescing aids & plasticisers;
ICAP SIRA pressure sensitive adhesives & pigment
pastes; ICL halogenated & phosphate flame

retardants; Kraton TOFA; MEL zirconium
crosslinkers; Ineos polybutenes & chlorinated
paraffins; Kuraray polyvinyl alcohol & polyvinyl
butyral; Lomon titanium dioxide; Mondo talcs; OMG
Borchers additives; Roquette starch & dextrin
derivatives; Sibelco aluminium trihydrate; Solvay
inhibitors & PVDC; Vinnolit PVC powders & pastes;
Wacker polymer dispersions, water repellents &
fumed silica.

Company Profile:
IMERYS Kaolin EMEA is a division of Imerys. With
over a hundred years' experience in the minerals
business, we offer customers engineered solutions

derived from our portfolio of kaolin and calcined
kaolins. We refine and engineer these minerals
through various—often proprietary—processes that
influence their concentration, size, shape, structure
and surface chemistry to obtain the exact
properties our customers require. Each year, we
process thousands of tons of materials to the
highest standards of quality, consistency and
reliability.

Company Profile:

PLEXUS is a brand of ITW ENGINEERED POLYMERS, a division of Illinois Tool Works, which has some 250 operating units in 33 countries worldwide. PLEXUS range of structural adhesives is supplied to many industries including Automotive, Truck, Mass Transit, Marine and Construction. The unique, high-performance structural adhesives represent a breakthrough in adhesive technology. They offer a combination of convenience, ease of use and superior mechanical strengths for bonding engineered plastics, composites and metals. PLEXUS adhesives can be mixed and dispensed using hand held cartridge dispensers or through automated metermix equipment. They are easy to

dispense and possess excellent gap-filling characteristics. The thixotropic formulation of PLEXUS adhesives allow use on vertical or inverted surfaces without sagging and cure on their own at room temperature. PLEXUS's unique methacrylate technology is similar to the chemistry of many recyclable plastics, so PLEXUS adhesives may be reground and remoulded with the plastic.

Company Profile:

Thanks to over 30 years in the business, providing advice for companies in 'high hazard' industries, we have deep knowledge and expertise of these businesses' insurance needs. Our knowledge and industry insight is fuelled by close working

relationships with the leading industry organisations.

We fit insurance to your business rather than trying to fit your business to an insurance product. Every business is unique. At OAMPS, we make it our business to understand yours. We always begin by taking the time to gain an insight into how your business operates and all the risks you may be exposed to. That puts us in the best position to evaluate a wide range of insurance policies from leading insurers then recommend the risk management and insurance plan that best suits you. We offer a full suite of specialist insurance and risk management products for the fuel, hazardous haulage, chemical and environmental sectors, including: Motor, Property, Goods in Transit, Liability, Business Interruption, Personal Accident, Directors & Officers Liability.

OAMPS aims to help clients minimise risk through

OAMPS
HAZARDOUS INDUSTRIES

proactive Risk Management, however should you be unfortunate to be involved in an incident we have specialist services to make the process as convenient as possible for you.

Other Benefits Available: Level 1, 2 & 3 Emergency Response. 24/7 emergency environmental and disaster response. 24/7 environmental support. Risk management and training. In house claims handling.

Company Profile:

Olin Epoxy is a leading global supplier of epoxy

products. Formerly Dow Epoxy, we are proud to continue to provide customers with the quality and reliability they have come to expect from us. Our leading technology has been the fundamental building block of robust solutions for diverse applications for more than 60 years. We continue to lead through innovative solutions for ever-changing global demands. Olin Epoxy is a specialist in the development and production of Epoxy Resins, Epoxy Resin Hardeners, Glycidyl Ethers, Toughening Agents, Phenolic Curing Agents, Epoxy Emulsions and Dispersions and Intermediates. Enabled by our innovation to both process and products, Olin Epoxy serves a diverse array of applications, including wind energy, electrical laminates, marine coatings, consumer goods and composites, as well as numerous applications in civil engineering and infrastructure products. We offer our customers high quality products and rapid service-driven action that makes us a reliable, successful and long-term partner in increasingly demanding markets. We successfully help shape and follow the direction

of technological and legislative change in the most varied areas of application, especially focusing on environmentally-friendly products to meet increasing demand for low-emission epoxy resin systems. High product quality and optimal support service are tremendously important to us. We meet these demands through constant verification and adaptation of existing business processes, and our advanced system for monitoring incoming and outgoing goods. Our company was certified under DIN EN ISO 9001:2008 and EN ISO 14001:2004 which are verified and confirmed on a regular basis by frequent internal and external audits.

Producer & Distributor of PVA, EVA, Acrylic, Hot Melt or PUD grades for Board Lamination; Carton, Case & Box Production; Carton Pafra®, AquaPAL® & ThermoPAL®

Accreditations:

BS EN ISO 9001, BS EN ISO 14001

Company Profile:

We believe in technical innovation and take pride in developing, manufacturing and supplying quality, competitively priced adhesive products for the paper converting and packaging markets. Our people are specialists and are committed to producing scientifically advanced, cost-effective adhesives that you can rely on. We understand that our customers want an adhesive that is consistent, clean and efficient, which is why we put technical development at the heart of all we do. By continually investing in the performance of our products, and discovering new solutions, we're able to provide our clients with robust, industry leading adhesives.

We are an independent business and have been working hard to ensure our customers get the best

possible level of customer service at every stage of the process for over 50 years. Whether an adhesive need can be met by a ready-made product, or the issue requires a bespoke solution, our sales and technical teams will consult, advise and recommend the best adhesive to meet the particular requirements.

Principal Trade Names:

Palace; Houseplan; Langlow; Homemaker; Laticrete

Accreditations:

BS EN ISO 9001, BS EN ISO 14000, BS OHSAS 18001

Company Profile:

Palace Chemicals Ltd is a privately owned UK based manufacturer of Building Chemicals & Adhesives and DIY products which includes a comprehensive range of tile and stone adhesives, grouts and surface "after-care" products under two distinctive brands, namely PALACE and LANGLOW whilst also offering a fully supported "private label" service for large nationwide distributors preferring to operate under their own brand. Whilst Tiling products remain the core activity for Palace Chemicals, we

were originally established in 1978 as a manufacturer of a broad range of building chemicals and damp-proofing products and this expertise remains a central part of the company's product range today. The Palace building products range still includes Water-proofing systems, timber treatments, mortar admixtures, general purpose building adhesives and protective surface coatings. Palace acquired Langlow Products in 1995 which is one of the pioneering DIY brands offering a unique and extensive range of DIY solvents, Decorating sundries, wallpaper adhesives, Fillers, sealants and Paint removers all under the LANGLOW brand and designed to suit the needs of the Decorating professional or DIY enthusiast. Palace Chemicals operates to standards accredited by the BSI for the Quality assurance, Environmental Management & Health & Safety Management and remains committed to developing product formulation and manufacturing technology which ensures the range offered is provided at optimum service levels and remains at the leading edge of all applicable performance and quality standards. The PALACE range includes an extensive portfolio of Tile and Stone adhesives, grouts, sealants and surface After-Care products along with floor levellers and building chemicals. The high reputation our products and services have gained with both the professional and trade users encourages many of

our larger customers & distributors to choose Palace as their private label partner. In the DIY sector we offer the LANGLOW brand range of products which is one of the UK's longest established DIY names and offers an extensive range of DIY solvents, Decorating sundries, Wood treatments, Wallpaper adhesives and Paint removers, all packaged and presented to suit the needs of the DIY & Decorating market. Recently Palace has become the UK licensed manufacturer of the Laticrete range of Adhesives; Grouts & Specialist tiling products, which have a global reputation in some of the world's most prestigious and ambitious construction projects where product performance levels are often well in excess of the more established standards and further enhances the range of advanced Technology manufactured by Palace.

Adhesives Supplier: ✓

Sealants Supplier: ✓

Parent Company: Protecta Group AS

Year of Formation: 1993

Size of Workforce: 41

Principal Trade Names:

Polyseam Ltd, Protecta, Graft

Accreditations:

ISO 9001; ISO 14001

Company Profile:

Polyseam Ltd, is a progressive organisation with offices in the United Kingdom, Turkey, Sweden, Norway and approved agents in the United Arab Emirates. Polyseam have been independently manufacturing 1st class brands in the UK for a majority of the world's leading suppliers of sealants, adhesives and fillers since 1993.

Our comprehensive manufacturing experience and capabilities, matched with dedicated research and development investment, has positioned our products as the top quality in Europe. Through our fire research facility in Norway, our team of specialists' design and test products, this is

underpinned by the commitment and certification of our quality management systems ISO 9001 & ISO 14001.

We at Polyseam continue to work hard in order to remain at the forefront of science and technology. Continuously adapting to ever changing environmental, industrial and economic pressures, developing innovative products and systems that equip trade professional with the right tools to do the job effectively and efficiently.

Services: Manufacturing - Polyseam's manufacturing and packing operation is completely flexible and caters for long and short runs alike. This allows minimal order product runs and ensures a cost effective solution for large organisations testing new or potential markets and products, or smaller companies requiring modest quantities. Polyseam is able to offer standard product options as well as provide bespoke solutions for your specific requirement or unique product.

Quality Control - Our award of ISO 9001 standard underlines our commitment to optimum quality standards. Our award of ISO 14001 standard highlights environmental management system and multiple aspects of our business procurement, storage, distribution, product development and manufacturing. As your manufacturer, we recognise that the quality of the product and the service we provide is reflected in your brand

Polyseam®

Intelligent Chemistry.

experience - therefore, we ensure we meet agreed supply criteria at all times.

Packaging and Branding - We provide a wide range of packaging options, allowing flexibility for new product development. We can deliver the product in plastic flexi tubes, tubs and pails. Additionally, we can supply the product in bulk for the client to fill and package independently - allowing you to supplement your own production if required. Polyseam offers a complete design and print facility for all packaging types. We can assist in the design of packaging to complement other items in an existing range or produce a new brand identity for new ventures.

Stock and Logistics - Polyseam can work with and deliver in line with your own stock management systems. We can manufacture and deliver complete orders, or manufacture and hold stock in our warehouses for future distribution.

Company Profile:

Power Adhesives manufacture a large range of shaped hot melt adhesives and glue guns from their modern factory in Basildon. With over 35 years of experience in this field, Power Adhesives is uniquely able to offer both shaped hot melt adhesives and truly industrial, hand-held glue guns. Power's range of hot melt glue guns are marketed under the "TEC" brand. Both large and small glue guns are available that are suitable for everything from precision bonding to spray application of hot melt. TECBOND hot melt adhesives are formulated and manufactured to provide market-leading bonding performance. Each adhesive has been carefully developed to maximise adhesion and optimise glue gun performance. Power Adhesives markets through a worldwide network of distributors. Constant investment in both

equipment design and adhesive formulation ensures we are able to provide reliable high performance hot melt bonding solutions to many industries.

Company Profile:

SCIGRIP Smarter Adhesives Solutions® is a leading

global manufacturer and formulator of Structural and Engineering adhesive products. SCIGRIP Smarter Adhesives Solutions combines two global leaders in the adhesives industry, Weld-On and Holdtite, enabling the manufacture of world class structural and engineered adhesive products on a global scale. Many of our patented formulations are used within the automotive, marine and OEM sectors around the world. SCIGRIP has a strong research and development team based in the USA and Europe focused on addressing customers' specific application demands as well as improving customer productivity to achieve ultimate success. SCIGRIP is committed to manufacturing quality products, complying to REACH and maintains ISO 9001 2015 certification for all of its manufacturing facilities. SCIGRIP has also achieved multiple third party product certifications including Lloyds, RINA,

and BRE, ROHS, WRAS, AGA specifications that ensure product performance in key applications. SCIGRIP's well established range of REACH compliant engineering, maintenance adhesive and sealant products have grown and developed with the industry sectors. The range includes industry-leading technologies in 10:1 and 1:1 methyl methacrylate (MMA). No-mix toughened acrylics. MS Polymers epoxies and epoxy sticks. Anaerobic based retainers, thread lockers, pipe sealants and gasket-makers. Cyanoacrylates (CA) and Ultra Violet (UV) cure adhesives. Solvent cements. Activators and Primers. RTV Silicones and gasket-makers in the unique 'Powercan' dispenser. SCIGRIP products are environmentally responsible, low volatile organic compound (VOC) adhesives.

Accreditations:

ISO 9001:2008

Company Profile:

SciTech Adhesive Systems, founded in 2002, are specialists in polymer technology and producers of

high performance adhesives and coatings. We serve customers in the converting, packaging, printing and furniture assembly industries among many others. From a modern state of the art manufacturing plant at Flint in the North West we offer a complete design and development service to ensure products are tailor made to customer needs. Off the shelf solutions are available but more often than not individual customer or end use requirements mean fine-tuning is necessary. SciTech is an ISO 9001:2008 approved company, with effective business management systems in place ensuring excellent standards are present in all areas. We are members of BASA (British Adhesives & Sealants Association), through which we are part of a large network of adhesive manufacturers allowing us to stay in touch with market trends and regulatory changes. State of the art storage, mixing, weighing and filtration equipment ensures consistently high quality products which can be

supplied in drums, semi-bulk or bulk tankers. SciTech can offer equivalent or alternative solutions to existing products. With a broad polymer base including PVA / VAE / EVA / ACRYLIC / NATURAL / PUD to name but a few. Raw material sourcing through multi-national producers allows us to compete on a global basis. Our experience and expertise in polymer and adhesive research & development allows us to solve problems quickly and effectively with minimum delay and disruption to the customer. We provide assistance with liquid handling including bulk storage, semi-bulk systems, flow control monitoring, filtration and additionally we offer a complete design and build service. We are developing pioneering new products in the areas of security and compostability and have received SMART awards for our work in both areas.

Accreditations:

ISO 9001:2008

Company Profile:

In July 2012 the TER GROUP further strengthened it's growing pan-European network by opening TER (UK) in Cambridge. The launch has proved a great success enabling UK customers to source a wide range of raw materials. The initial focus was on offering raw materials for the Paints & Coatings, Construction, Adhesives, Textiles, Paper and Glass Fibre industries. Today TER (UK) are servicing a wide range of UK customers with both direct shipments or with materials from strategically located UK warehousing.

In a second phase TER (UK) enhanced it's raw material portfolio by being appointed the UK Distribution partner for a variety of product lines

from both Evonik Industries and Clariant SE. TER (UK) have also implemented the activities of it's Group Industry "Food & Feed" which is a core business activity of the TER GROUP. TER (UK)'s aim is to continue the TER philosophy of working closely with our customers to identify the raw materials they want - and to provide them with a range of products that meets their requirements in terms of quality, price, delivery and back-up.

Company Profile:

UK subsidiary of Wacker Chemie AG. Wacker Chemie AG is the largest manufacturer of silicones in Europe with all manufacturing sites accredited to ISO 9001 and ISO 14001.

The ELASTOSIL® product range includes the full spectrum of silicone materials for all market sectors e.g. building and construction, rubber fabrication, consumer care, textile, paper, chemical, coatings, industrial sealing and bonding. For the Sealants industry Wacker offer raw materials as well as ready-compounded sealant in bulk, cartridges and foilpacks. In the GENIOSIL® range Wacker offer organofunctional silanes, prepolymers and "hybrid" sealants.

WACKER POLYMERS is a leading producer of state-of-the-art binders and polymeric additives based on polyvinyl acetate and vinyl acetate copolymers.

WACKER

They are used in construction chemicals, paints, surface coatings, adhesives and nonwovens, and in fiber composites and polymeric materials based on renewable resources.

Wacker also manufacture HDK® fumed silica - available in a range of hydrophilic and hydrophobic grades - which are used primarily for their thickening, thixotropic and reinforcing properties in the sealant, resin and surface coating industries.

Your world-class workplace business partner

We're with you all the way

Another year in the Life of a dedicated **BASA** member!

2016 was a momentous year for BASA members, with the Brexit Referendum result sending shock waves through the business community. Happily, it wasn't all about work and there were some great opportunities to relax and network, starting with the Industry Lunch after the 33rd AGM at the National Space Centre, Leicester, in March 2016. We then moved on to the BASA Sports Day in June (although in the midst of the thunder and lightening on the golf course, relaxation turned into more of a trial), an informative Open Technical Forum held at Croner House in October and, of course, last year's Dinner Dance held at the Castle Hotel Windsor in November. That was also a wet weekend, but the magician entertained BASA members (some more than others, but you needed to be there to witness that!) and the BASA

regular musical entertainers 'Broadband' once again kept us all dancing until late. Numbers were down, but spirits were up, and we would hope to see you all at this year's Dinner Dance at the Spectacular Chester Grosvenor Hotel on 25 November 2017.

Enjoy this page of reminders of those gatherings, hopefully to encourage many of you to attend the events in 2017 and we would love to see some new faces booking for our events this year (as well as our regulars, of course!).

Our dedicated events website (www.basaevents.co.uk) will once again manage the bookings this year, in conjunction with Mint Events, and early bird deals will be available for this year's Sports Day on 13 June (with the free-to-members Open Forum being held at the same venue on the 14 June) and for the Dinner Dance on 25 November.

The Eastman logo is displayed in white, uppercase letters on a blue geometric background.

Collaborating on innovative solutions

The Polyseam logo is written in a black, cursive script font.

ADVERTORIAL

Growth of manufacturer recognised at national design impact awards

Sealant and adhesive manufacturer Polyseam has achieved the ultimate design accolade for the rebrand of its GRAFT product range. The Yorkshire-headquartered company and its branding agency The Engine Room were both presented with a gold design impact trophy at the glittering DBA Design Effectiveness Awards in London.

But the GRAFT project also went on to scoop the ultimate recognition of the evening when it was announced as the Grand Prix winner of winners at the end of the night.

Since GRAFT's launch in 2014, annual sales have increased by a staggering 744% and export levels have risen by more than £1million. In fact, this transformational business exercise has played a significant part in Polyseam now building a 50,000sqm factory which is expected to create a further 50 jobs by 2020.

It was this bottom line impact that impressed the line-up of high-profile judges, which included Andy Palmer, CEO of Aston Martin; Josh Berger, president and managing director of Warner Bros; and renowned entrepreneur Deborah Meaden.

Commenting on the win, Polyseam's marketing manager Olando Salina said: "The evolving challenges in the manufacturing market mean we must continually innovate to drive growth. We therefore focused on the development of an environmentally friendly, all-in-one adhesive and sealant created using our own in-house expertise.

"This high-performance technology was already award-winning in its own right. But it didn't achieve the traction we sought, which is why we engaged The Engine Room to help clarify our market position, overhaul the branding of this product range, and craft the communication materials we'd need moving forward. The Engine Room team has specific expertise in this field, and we were therefore delighted when GRAFT was 'born'. The project success is a testament to the collaboration of these forward-thinking business and design brains."

The Engine Room's managing director Lesley Gulliver added: "The building, construction and manufacturing sectors are perhaps not renowned for their design prowess. But this project goes to show that strategic creative thinking is about much more than just what looks good. The overhaul of this product range and the development of the GRAFT brand has helped to revolutionise Polyseam's entire business."

Polyseam has been independently manufacturing first-class brands for the majority of the world's leading suppliers since 1993. The company manufactures more than 150 different products, and exports to 21 countries globally.

For further information please contact Olando Salina

Members' Services: Maintaining a Close Connection

Jim Palmer, TSC Chairman and BASA's Technical Officer

BASA's strong links with government, industry, standards organisations such as BSI, and other organisations and associations across the UK, Ireland and Europe ensure that we represent Members' views, and offer guidance on technical and compliance issues, something that will be critical in the next two years following the decision to leave the EU.

Representation and Regulatory Guidance

Members are encouraged to participate in the regulatory work of the association by joining relevant working groups and/or commenting via the on-line consultations on our website. Minutes and reports of meetings are published on-line in the Members' Area of the website.

Information, interpretation and guidance about specific regulatory issues relating to the adhesives and sealants industry derived via these working group meetings is delivered to members through a range of communications, including technical and management notices, our newsletter (the BASA Bulletin), regular technical meetings, the website and special training seminars.

Specialist consultants provide updates to members on key issues of relevance to the adhesives and sealants industry. These include:

- Technical matters arising from Regulations within the UK and EU;
- UK and related EU regulations regarding the supply and transport of dangerous goods;
- Sustainable Production and Consumption, and the new approaches to regulation.

Training

BASA arranges a number of training seminars, covering REACH, health and safety, and other relevant regulatory issues each year

to complement its briefings, notices and open technical meetings. The Association also works closely with academic and training organisations on courses for workers in industry, and the use of adhesives and sealants.

Promotion of the industry

BASA actively works to raise the industry profile and promote member companies through the BASA website, handbook and its links with government, trade and industry, end users and other organisations.

BASA Guides

BASA publishes a number of free and paid-for guides about our industry and how to use its products. The guides are produced with the help of members and are available for download from the BASA website for users and specifiers alike.

There are more than 50 Guides free for members – visit the Members' Area and go to Committees and Reports or Guidance Notes. We are regularly adding documents to inform and advise members and, if any member would like to see additional topics added in 2016, they should contact BASA's Technical Officer Jim Palmer or BASA Secretary Lorna Williams with specific requests for consideration.

Networking

BASA seeks to promote the legitimate interests of its members to enhance the prosperity of the industry. An active programme of

technical, business and social events provides a forum for sharing and exchanging information on issues of broad concern to our industry, as well as assisting the development of good personal relationships. BASA's Open Technical Forums are held twice a year. These free events, for BASA members, enable delegates to meet, talk and discuss the vital issues challenging our industry; to learn about the technical programmes of the Association; and to receive presentations on technical matters of importance.

Standards

BASA is the recognised industry body for the UK, representing the adhesives and sealants industry to standards bodies such as BSI, CEN and ISO.

- Members of BASA's technical working groups are active within many BSI Committees, including PRI/52 (for adhesives) and B/547 (Sealants), and represent the industry on a wide range of BSI, CEN and ISO working groups, developing new, and reviewing existing, standards and associated test methods.

- Members can review the regular updates on the progress of standards under review or development within the Members' Area of the BASA website.
- Members are encouraged to review the lists regularly and contribute to the work of the Association by sitting on an appropriate BASA technical working group or forwarding comments to the relevant BASA working group Chairman.

European Representation

Since its creation in 1974, BASA has been a leading member of FEICA – the Brussels-based association of European national adhesive and sealant associations and larger multi-national adhesive, sealant and raw material producers. We work closely with both FEICA and the other national associations to promote UK interests on the many European public affairs issues, including EU directives and regulations. We expect this to continue, despite the decision to leave the EU, as many of our members will continue to operate in the EEA.

Website

BASA's brand new website, which should go live in the first half of 2017 – www.basa.uk.com – has three key objectives: to promote and advance the interests of the UK adhesives and sealants industry; to inform members of the Association about BASA activities and key regulatory, technical and other issues; and to provide assistance to users and potential users in the selection and use of adhesives and sealants.

The public area of the website promotes member companies and their products to site visitors every week. Powerful search engines identify BASA members, who provide particular adhesives, sealants or ancillary products. The members' area, used by around half the member companies every month, includes more in-depth news and information about the industry and BASA activities, and provides the facility for free discussion and sharing news and information within a monitored environment.

Newsletter

The newsletter of the association, the *BASA Bulletin*, is published three times a year and posted to members in February, May and October. The Bulletin provides readers with an overview of Association activities, and highlights the main news, issues and activities within the industry.

Secretariat

The day-to-day work of the Association is co-ordinated and managed by a dedicated team, led by the Secretary. They undertake administration and policy work, and support the Council, Technical Steering Committee and a number of the working parties. The Secretary also represents BASA to a number of UK and European organisations. The team includes a technical officer, supporting the technical programmes of the Association.

What do I get when I join BASA?

In addition to the extensive Networking opportunities and technical assistance that BASA membership gives you, BASA has agreements and membership with a number of third party providers who offer savings and/or extended services exclusively to our members. More information can be found on the BASA website: www.basa.uk.com

1. REACHReady

REACHReady is available to help British Adhesives and Sealants Association (BASA) members with REACH, CLP and BPR – the most complex and wide-reaching chemical regulations ever devised.

BASA members subscribe by entering their own details onto our website, along with a partner code that is unique to the programme. Once completed, BASA will be sent an email to confirm whether that the applicant is entitled to the discount or not.

REACHReady will then invoice the BASA member directly for the appropriate amount and upgrade the member to Gold upon receipt of payment. And that's all there is to it!

Sign-up process

To take advantage of this offer, you need to:

- visit www.reachready.co.uk
- click on 'Join for Free', followed by 'Join as a Gold Subscriber'. If you are already a Silver subscriber, log in with your current password and click 'Upgrade to Gold'
- work to complete the form, ensuring that you input **BAA623** when you get to the 'Partner Code' field, which is towards the bottom of the form

The full benefits of Gold include:

- Access to a specialist - staffed email / telephone Helpdesk, for all your REACH, CLP and BPR queries
- Use of a member logo on your website/ promotional materials
- Up to an hour of free, scheduled telephone consultancy for new subscribers (tailored to your specific needs and held as a conference call with colleagues if you wish – equivalent to £170+ VAT)
- Free use of our SVHC Database, which will help you find the products and markets in which Candidate List substances are commonly used
- Comprehensive email news alerts
- 20% discount on all REACHReady seminars, training and workshops (equivalent to at least £88)
- REACHReady Review – our regular newsletter
- Access to exclusive guidance and analysis documents
- Priority use of our Matchmaker service.

The cost for BASA members to obtain a REACHReady Gold subscription under the Partner Programme is £300, plus VAT, reduced from £400, plus VAT.

For more information, please call: +44 (0) 20 7901 1444 or email: enquiries@reachready.co.uk

2. Company Insurance

With more than 30 years of experience, OAMPS continues to provide insurance solutions to businesses in the manufacture, blending, supply, import, wholesale and distribution of chemicals.

We fit insurance to your business, rather than trying to fit your business to an insurance product. Every business is unique. At OAMPS, we make it our business to understand yours.

We always begin by taking the time to gain an insight into how your business operates and all the risks you may be exposed to. That puts us in the best position to evaluate a wide range of insurance policies from leading insurers, then recommend the risk management and insurance plan that best suits you.

We offer a full suite of specialist insurance and risk management products for the fuel, hazardous haulage, chemical and environmental sectors, including:

- Motor
- Property
- Goods in Transit
- Liability
- Business Interruption
- Personal Accident
- Directors & Officers Liability.

OAMPS aims to help clients minimise risk through proactive Risk Management. However, should you be so unfortunate as to be involved in an incident, we have specialist services to make the process as convenient as possible for you.

Other Benefits Available:

- Level 1, 2 & 3 Emergency Response
- 24/7 emergency environmental and disaster response
- 24/7 environmental support
- Risk management and training
- In-house claims handling.

3. Testing

As a Notified Test Laboratory (2538), 4Ward Testing is able to carry out all testing for performance requirements and for CE Marking purposes under the Construction Products Regulation (CPR) for ceramic adhesives under EN12004-1 and sealants under the EN15651 series of standards.

With many years' experience in Construction

Product Testing, we can offer testing to include resistance to flow, change in mass and volume, tensile, adhesion, cohesion properties, elastic recovery, resistance to compression, self-levelling properties, shore hardness, density and identification testing. Also bond strength (initial and after water/humidity/heat and freeze/thaw) and open time.

Our laboratory facilities, technical expertise, combined with customer communication focus throughout our testing projects, have provided our clients with the ideal testing model for over four decades, allowing your business to focus on increasing revenue streams.

Our UK Notified Test laboratory is established to carry out testing to the following: hEN 15651 standards: BS EN ISO 7390, BS EN ISO 10563, BS EN ISO 10591, BS EN ISO 10590, BS EN ISO 10590, BS EN ISO 8339, BS EN ISO 11431, BS EN ISO 7389, BS EN ISO 8340, BS EN ISO 9046, BS EN ISO 9047 and the following hEN 12004 standards: BS EN 1348, BS EN 1324, BS EN 12003, BS EN 1346

Once your product carries the CE mark, you are able to confidently market and sell your products to a wide range of international marketplaces without any further testing. In the few cases where your products need to be tested to new standards, you can work with 4ward Testing to ensure that your tests requirements are kept to a minimum and are performed to the highest defined standard.

We are pleased to be able to offer BASA members a 5% discount on test programmes with a value over £1,000 + VAT, until further notice.

4ward Testing has expertise in the following:

- Material Testing and Product Testing to UK and International Standards
- Environmental Testing

- Benchmarking
- CE Marking
- Product Design & Development
- Bespoke Tests and Custom Rigs
- Quality Systems
- Construction, Automotive, Aerospace, Oil and Gas and Manufacturing Industries.

4. Recruitment and Training

Chemical Search International is proud to support BASA with recruitment, training and funding services

Chemical Search International specialises in the chemicals sector, with first-hand experience of the polymers, adhesives and sealants industries. We offer a full suite of cost-effective recruitment services, including the ability to advertise vacancies where you can reach our network of over 40,000 chemical industry professionals. See our feature on page 14 for more details

5. BASA Memberships

In addition to the specialist services above, we also have the following memberships which BASA members can take advantage of, with access to information and events:

- Construction Products Association membership
- FEICA National Association Membership
- BSI membership
- Croner membership.

Further details can be found on the BASA website: www.basa.uk.com.

Working Groups

BASA's working and task groups cover a wide range of technical, standards and regulatory issues. Experts from member companies, supported by consultants where required, are tasked with the work of each group on behalf of the membership. Minutes and reports and any other guides and publications are available to members via the website: www.basa.uk.com

Working Group Vacancies - Urgent Appeal

We are seeking new members for the Environment & Sustainability Working group, the H&S Working Group and the Packaging Adhesives Working group. There are some key issues, particularly for the H&S WG and the Environment and Sustainability WG that BASA needs to be able to provide input for on behalf of members, so additional participation is vital to be able to properly reflect member's views and formulate the necessary guidance and position papers.

The History of BASA

The British Adhesives and Sealants Association (BASA) has been the representative association for the UK adhesives and sealants industry for more than 30 years. Formed from the merger of the Sealants Manufacturers Conference and the British Adhesives Manufacturers Association in November 1983, BASA can trace its pedigree back to the 1940s when adhesive and sealant manufacturers were invited to assist the UK government with the strategic planning of materials for the industry.

During the ensuing period, organisations such as the Adhesive Manufacturers Association, the British Resin Rubber Manufacturers Association, The British Adhesive Manufacturers Association and the Sealant Manufacturers Conference gradually coalesced to form what is now Europe's only national trade body dedicated solely to the interests of the adhesives and sealants industry.

Today, the British Adhesives and Sealants Association involves more than just adhesives and sealants producers. We also enjoy the active support of many suppliers of raw materials and services, machinery manufacturers, distributors and allied businesses. BASA encourages all members, large or small, to play a full and active part in its work to ensure we fully represent and meet the needs of our industry.

The code

- We will seek to achieve the highest standards and will offer our services honestly and honourably in a fair manner, and encourage our member companies and stakeholders to do the same.
- We shall behave in a professional manner and will respect the reputation of our sector and the other organisations with which we liaise.
- We will undertake to promote co-operation within the sector or sectors in which we work, and between members, customers and suppliers. In doing this, we will seek to identify and apply good practice.
- We will commit to improving the performance and reputation of the sector or sectors in which we work.
- We will endeavour to maintain and improve the quality of our work through constant review of our aims, activities and outcomes, and the cost-effectiveness of every activity. Where there is a proven and positive cost or benefit to doing so, we will aspire to seek appropriate certification or accreditation under a recognised quality assurance scheme.
- We will follow the rules of any public body to which we make representation and, where appropriate, seek guidance from the public body on any rules of relevance.
- We will pay our bills promptly, and encourage the same of our members and suppliers.

- We are committed to maintaining the highest degree of integrity in all our dealings with potential, current and past members, as well as other stakeholders.
- We recognise that our member companies may be in direct competition. We will strive to avoid showing any preference towards any member company over another and endeavour to maintain an independent position in our dealings with them.
- We will ensure that all relevant competition laws are respected by our members

- We will never offer any financial or other inducement, including direct and indirect payments, offers of employment or substantial gifts or entertainment, to any member, prospective member or holder of public office in an attempt to influence any decision-making process which may affect our organisation or our industry in any way.

- We are clear and precise about our identity and any industry or sector that we may represent.
- We will endeavour to represent the common interests of all members.
- Where there is diverging opinion within the membership, we will seek to present a balanced case, respecting the different interests involved. Where appropriate, we will work with non-members and other associations in allied sectors on matters of joint concern.
- We will clearly declare any relevant financial or other links to public office holders, in order to ensure that he or she is protected from any potential conflict of interest.
- We will use reasonable endeavours to ensure the truth and accuracy of any statements made or information provided to any third party, in order to never knowingly make false or misleading claims or misrepresent the views of others.

- We will always try to maintain commercial confidentiality, and also protect all personal information received in the course of providing business services.
- We shall take reasonable endeavours to safeguard the confidences of all members and past members and shall not disclose these confidences to their disadvantage or prejudice, unless the member has released such information for public use or has given permission for disclosure.

- We will strive to take reasonable care that all professional duties are conducted without giving offence on the grounds of race, religion, disability or any other form of discrimination or unlawful reference.

BASA Meetings: Code of Conduct

All companies must at all times comply with the requirements of competition law, as set out in the Competition Act 1998. The Act requires that companies must not engage in any practice, which will, or may, prevent, restrict or distort competition or constitute an abuse of a dominant position.

Application of Guidance

These guidelines apply to all persons attending any BASA meeting, or representing the Association at any external meeting, or communicating by post, telephone, e-mail or by any other means on any issue or activity connected with the affairs of the Association. At the start of all BASA meetings, the Chairman will remind those present that the meeting is held under the terms of the BASA Code of Conduct and will so record in the minutes. All attendees will be asked to confirm compliance as they sign the attendance form.

Conduct of Meetings

- All Committees, Working Parties and Task Groups must have agreed Terms of Reference and a formally appointed Chairman.
- All meetings must have a clear purpose, which is communicated in advance along with an agreed agenda.
- The Chairman must ensure that the meeting keeps to its agenda.
- The agenda and minutes/action notes of each meeting must be kept together with a list of participants.

Copies should be posted to the appropriate Forum on the BASA website and to the BASA office.

- Participants should never discuss any issues that could affect competition in a market (such as collusive or exclusionary practices). A non-exhaustive list of definite “no-go” areas include discussions on: prices or other terms on which goods or services are currently, or are to be, provided; sharing markets or customers; limiting the supply of goods or services (to keep the price up); rigging bids or colluding when tendering; and exclusionary measures, including any against non-BASA members.
- Attendees should take care with their language – careless use of language can cast suspicion of collusion on otherwise legitimate discussions. For example, do not use “guilty” vocabulary, such as “stitch up the market”, “cartel” or “dominant”.
- If the Chairman of the meeting, or any other person present, becomes concerned that discussions are potentially anti-competitive, he/she should ask for the subject to be changed at once. Attendees must not speculate about whether an activity is or is not in breach of competition law and, if in doubt about an activity, must stop discussing it. The Chairman’s decision will be final. This is because mere presence at an anti-competitive discussion is sufficient to be implicated in an infringement.

FEICA® – representing and advocating our common interests

FEICA, the Association of the European Adhesive and Sealant Industry, is the multinational association for the adhesive and sealant industry throughout Europe

FEICA's members comprise of adhesive and sealant manufacturers, national adhesive and sealant associations, channel partners, and the institutes and associations of related industries.

FEICA works with its members to create a powerful voice for the adhesive and sealant industry in Europe, constantly seeking to improve the economic and legal landscape. Our industry is a success story that makes many everyday products possible, contributes to the economy, fosters sustainable development, encourages innovation and offers stimulating careers for people with a wide range of skills. FEICA's success stems from:

Making our members' voices heard in Brussels

The European Community's regulatory environment is mostly shaped in Brussels. FEICA has established an excellent working relationship with EU legislators

and is recognised as a trusted and competent partner for issues affecting the adhesive and sealant industry. With its base in Brussels, its broad representation from the industry and its excellent collaboration with related industry organisations, FEICA is an extremely effective advocacy platform.

FEICA members are encouraged to take an active role in its working groups to help shape the industry's position on European issues. Active participation offers a unique opportunity to be heard by the European institutions and to benefit from the cooperation with other colleagues.

Keeping up-to-date on emerging legislation

Through our dialogue with EU legislators and our information exchange with the national adhesive and sealant associations, we are able to keep our members informed about the key developments affecting the adhesive and sealant industry. As a result, FEICA members can anticipate regulatory changes and integrate them more smoothly into their own operational planning.

Providing valuable information and advice

Our members receive information tailored to their needs, analysed by FEICA with the unique perspective of the adhesive and sealant industry, and with input, as appropriate, from its national association members and other experts.

Sharing best practice, exchange views and network

Our members also benefit from opportunities to meet with colleagues, industry associations, and raw material suppliers from across Europe for an exchange of views and best practice on common issues affecting the Industry. While FEICA works at the European level, our national association members are active in their own respective countries. This representation at both national and European levels provides added impact to our activities.

EFFECTIVE CUSTOMER COMMUNICATION WORKSHOP WEDNESDAY 12th JULY 2017

So how might you improve your communication skills? Many people simply talk without thinking about how their message is being received by the other party. The key to success is to listen and then give your message in a manner that the other person is open to receive. This requires an appreciation of your own and other people's communication styles. If you have this then it becomes possible to plan your approach to make the greatest impact on your audience. Imagine if everyone in your firm did that?

Now your front-line sales people are experienced with doing this, but what about your technical, production, commercial and other people who have may have direct customer contact, either face to face or over the phone. Could they get better at this so as to influence customers more effectively?

It is fair to say that without effective communication at the front line you will not win much business. But it is equally important to have this throughout the customer journey. This could be through technical service visits to ensure that your products are running smoothly. This is also an opportunity to spot new opportunities so you will want your staff to listen and pick up the subtle cues from your clients on how you can offer a better service or spot new ways to gain business. But equally this could happen through customer service discussions over the phone.

This workshop has been developed to help people increase and maintain success with customer communication in all areas and to grow skills in building and maintaining on going customer relationships.

THIS WORKSHOP IS INTENDED FOR;

People who have some contact with customers or prospective customers who want to develop their skills in communicating more effectively to help win more business. These people could be from technical, production, commercial, customer service and even accountants!

AT THE END OF THIS WORKSHOP PARTICIPANTS WILL;

- Be more confident in making customer presentations and supporting the sales effort
- Understand their own preferred communication style
- Be able to recognise and appreciate other people's communication style and adapt their own style to influence more effectively
- Form stronger relationships more quickly with customers
- Be able to pick up subtle cues for further business opportunities

LEADING YOUR TEAM THROUGH CHANGE - TUESDAY 17th OCTOBER 2017

The one thing you can guarantee about business is constant change; could be sudden or gradual, but it will happen. This can be as a result of external factors such as economic, environmental, new technology or political changes. But also can be driven internally by the need to change your company direction, or from a tactical point of view to just do things differently. As the pace of change increases so does the need for you and your team to anticipate, react and seize the opportunities this presents.

Inspiring and supporting your team to continue to deliver during this will be one of your major challenges. You want a team that is excited and not fazed by challenge and change. You want to ensure complete buy in from your people, and at the same time avoid the burn out and fatigue that can arise.

This requires a robust process for handling any changes during growth and understanding how different people will need to be treated if they are to come along with you. Get this right and you'll save yourself time with, less mistakes, more productive people, better results and a whole lot less stress.

So take the time to step outside the day to day business to work with some like-minded professionals on this interactive workshop and build a team that thrives on innovation and challenge.

THIS WORKSHOP IS INTENDED FOR;

Managers who have the responsibility to deliver change within the organisation. This can be from any department or function within the company.

AT THE END OF THE WORKSHOP PARTICIPANTS WILL HAVE;

- Clarity on your own leadership style and approach to change
- An understanding of how change affects different people and how to recognise these needs in members of your team
- Some new tools and techniques for introducing change
- A strategy for gaining commitment and loyalty from your team during change
- Ways to develop and maintain a positive culture about change.

**Price: £300 pp + VAT

We all love great partnerships.

Not only do we represent the largest Sulphate TiO_2 manufacturer Huntsman, we compliment that range with Kaolin, Calcium Carbonate, Silica, Barytes and Zinc Barium products enabling us to **advise you on your 'perfect mix'**. However, we don't just purely distribute white products anymore, we also represent Organik Kimya and their range of polymer emulsions.

rakem. | the perfect mix.
